IMPORTANT ATTENTION

To fully immerse yourself in the rich content of this book, we cordially invite you to explore the courses section on our website, www.PathReview.net.

Additionally, for more insights, feel free to visit our foundation's website at www.FORESC.com.

In the interim, we encourage you to peruse our journal, accessible at www.ArchivosDePatologia.com.

Dr. Severino Rey, PhD

The art of learning has the mission of increasing knowledge in medicine and related biomedical sciences. Its main objective is to strengthen the training of future specialists and those motivated by this branch of medical sciences with robust tools and research on topics of significant prevalence in the population, encourage the publication of interesting cases and the results of research carried out in places like Spain, Latin America and other developing countries. An effective way to meet this objective is through online courses that range from the genetic-molecular bases of diseases to the application of advanced auxiliary technologies to achieve the most complete and accurate pathological diagnosis, evaluate prognostic factors and develop prevention strategies for sustainable health.

Dr. Severino Rey N. - Dr. Carlos Cardenas A.
